SCOPE OF WORK

1. General Scope of Work

The Pest Control Service Provider shall provide all labor and materials, technical services, tools and equipment, supervision and other incidentals for the extermination and effective control of all disease-transmitting and destructive pests such as flies, mosquitoes, cockroaches, ants, rodents, mice, termites and other flying and crawling insects.

A. SYNERGIZED STRUCTURAL PEST MANAGEMENT

The Pest Control Service provider shall undertake Termiticide application on soil in which it will be drenched with diluted termite chemical formulation to create protection against subterranean termites within the immediate area of every structure. This treatment should manage termite colonies and eventually kill the whole termite population.

The termiticide formulation shall be applied using power sprayers that can generate sufficient pressure to distribute the termiticide into the soil and attain maximum effective results.

During the initial treatment, the following shall also be undertaken:

I. Mound demolition if mound exists.

II. Cordoning method for existing structures where immediate surroundings is covered by concrete slabs. Holes ranging from 12.7mm to 25.4mm in diameter are bored as close as possible to the structure and deep enough to penetrate the slab. The liquid termiticide is injected through these perforations using the soil/slab injector equipment.

III. Wood Drenching – Wet chemical spray applications in infested areas/sections of the unit and treatment to components susceptible to termites' attack such as ceiling wood works, door jambs, partitions and dividers.

IV. Surface Spray Application – the approach of actual spraying procedure directed into the wood or other surfaces that show signs of infestation or that maybe termite targets in the future.

V. Regular inspection and boosting of all treated areas shall be conducted every month after the initial treatment to ensure termite infestations have been eliminated.

VI. Spot treatment for immediate colony management.

B. SYNERGIZED HOUSEHOLD PEST MANAGEMENT

The Pest Control Service provider shall identify and focus on the pest problem at the time of service which treatment/application to use from the following methods:

I. General Spraying – Direct spraying in all areas susceptible to insects and pests (e.g. ants, cockroaches, silverfish, carpet beetles, bedbugs, ticks, etc.) particularly on cracks and crevices in which pests hide or through which they may enter the building.

II. Void Treatment – application to enclosed spaces where pests may live, hide or travel.

III. Spot Treatment – surface application to limited areas where pests are likely to be present.

IV. Direct Contact Treatment – application of wet spray to exposed pests for immediate kill.

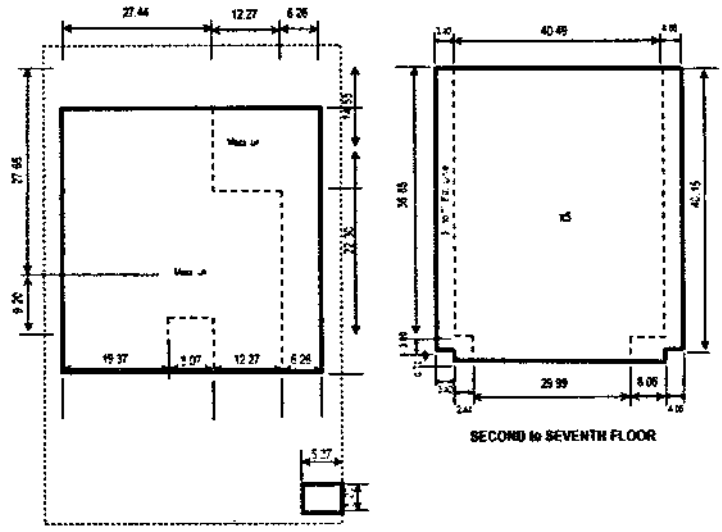

V. Misting – treatment with a broad-spectrum insecticide using an electro-mist aerosol machine for an effective control of mosquitoes, flies, and other fluing insects and pests inside the offices or buildings.

VI. Insecticidal Gel Baiting – application of gel baits on wirings and apparatuses, inside computer boxes, drawers, pantries, under sink,

	piled documents and other sensitive areas where cockroaches breed. VII. Rodent Control 1. Installation of rat tracks and rat baits (anti-coagulant rodenticides) to all breeding areas and avenues of rats and mice. 2. Regular inspection of all bait trays and bait stations installed at regular intervals as identified. This is aimed at determining its effectiveness or to replenish the bait. 3. Searching and disposal for the snared or dead rodents. 4. Inspection of the entire protectible area particularly pantry, storage rooms, ceiling and other potential harborage to check signs of infestations such as droppings, damages, urine, runs, footprints, smears and nests. VIII. Residual Insecticidal Spraying – Thermal fogging/misting of all floor drains, plant boxes, drainages, piled up woods, garbage and other areas where insects/pests congregate, crawl, and hide including perimeter/premises of the buildings. IX. Monitoring/Trapping – technique of capturing pests as a means to identify, quantify or control adult stages of an infestation. X. Exclusion – protecting an area against minor pest access either by mechanical alteration or by rendering minor access points and harborage impassable via liquid repellent solution.
