- d) Concrete Masonry – 6” thick Non load bearing concrete hollow blocks. Staggered laying is done by alternating the placement of joints, on the other hand, stack bond is aligning the blocks vertically over the other blocks so that edges form a straight line. As nonloadbearing, the minimum requirements for net area compressive strength are lower than for ASTM C90 units at an average of only 600 psi. For typical nonloadbearing applications, this strength is more than adequate, but stronger units may be commonly available without a cost premium in some areas. Color requirements are not covered in the specification, and should be specified in the same way as that recommended for ASTM C90 units.
- e) Paints – Paints to be used shall be of any brand commercially available and should come from suppliers of good market reputation. Paints shall conform to ASTM Standards for Liquid Paints.
- f) Electrical Materials - All electrical materials shall be of any brand that are locally-available and from suppliers of good community standing. All electrical materials and installation shall be in accordance with the provisions of the

National Electrical Code and the Local Fire Safety Ordinance and shall be installed under the direct supervision of a licensed electrical practitioner.

III. Concrete Proportioning, Consistency and Mixing for Plastering (if any)

Proportioning of concrete and aggregates shall be as such to produce a concrete mixture which will readily work into the corners and angles of forms and around the reinforcing bars. The combined aggregates shall be of such composition of sizes that when separated on No. 4 US Standard Sieve, the weights of the aggregate passing through the sieve (fine sand) shall not be less than fifty percent (50%) of the total. Use concrete mix 1:2:4 with cement factor of 9 for Iligan-sourced aggregates.

IV. Execution of the Project

Prior to the start of the project, the contractor is required to coordinate with the Engineering Services Division manager or his authorized representative to conduct pre-construction survey to determine the actual coverage, measurements, and items for retrieval or disposal as described in the items of work of the project.

Pre-cautionary measure should be undertaken such as installation of signage before the demolition and extraction works will start, excavation, back filling and tampering of ground before any pouring of concrete for wall footing and column be performed, filling of 6" CHB wall then plastering of two sides of the wall, to also include fabrication and installation of fence barbed wires.

All electrical installations shall comply with the latest National Electrical Code and all existing local ordinances, and shall be under the direct responsible supervision of a licensed electrical practitioner. Provide appropriate conduits for all wirings. Actual load test shall be conducted before the acceptance of electrical works.

All painting works shall be done only after the surfaces have been thoroughly derusted, smoothed, cleaned, washed/ scrapped from all dirt, oil, and greasy materials. Provide one coat of metal primer before the application of two (2) coats enamel top coat. Rafters, girts, and purlins will only be applied with metal primer.
